

## Linux installation on Apple iBook G4

Based on instructions from:

- <http://people.debian.org/~branden/ibook.html>

Download files from

<http://http.us.debian.org/debian/dists/testing/main/installer-powerpc/current/images/powerpc/netboot/>  
(except mini.iso) by alt+click on filenames and put it in root folder of first HFS+ partition.

My df output follows:

```
mac:~ apollo$ df
Filesystem          512-blocks    Used   Avail Capacity  Mounted on
